ABSTRACT

South Labuhanbatu District has five Sub-Districts. One of them is Kotapinang Sub-district. Kotapinang Sub-district is in the capital of South Labuhanbatu District. Kotapinang Sub-district has 9 villages. The village is an extension of the regional central government to reach out and make it easier for villagers to take care of their needs. After the Village Regulation, the Village has entered the development priority. The village received more attention from the central government. Village development cannot be completed by the village government. However, Youth has an important role in developing and utilizing village potentials. The method used in this research is descriptive method with a qualitative approach. To Determine the Potential of Village Potential in Kotapinang Sub-district, South Labuhanbatu District. Examining the role of youth in Utilizing Village Potential in Kotapinang Subdistrict, South Labuhanbatu District. This research sees that there are three roles that young people play in exploiting the potential of villages in Kotapinang Sub-district, South Labuhanbatu District. First, the role of youth as a moral force in exploiting the potential of villages in Kotapinang Sub-district, where youth actively participate. Second, the role of youth as social control in exploiting the potential of villages in Kotapinang Subdistrict, where youth pour out ideas, ideas and oversee village governments in using the village budget. Third, the role of youth as agents of change in exploiting the potential of villages in Kotapinang Sub- district. Where youth form youth groups exploring their potential and exploiting it.

Keywords: Role of Youth, Utilization, Village Potential

INTRODUCTION

Indonesia has considerable natural resource potential. Each region in Indonesia has different potential. Mountainous areas have exotic views, coastal areas have good sea charm. The vast potential of nature that stretches must be managed efficiently and professionally. Utilizing the potential of each sector can open up jobs and increase economic growth in the surrounding community. In recent times the village has become an important highlight in increasing the potential of natural resources. The central government gives special attention to the village government regarding the utilization of village resources. In managing and utilizing village resources the entire community must join hands, let alone youth. Youth has a fundamental role to increase the potential of natural resources in each region respectively. Each region includes youth to explore and exploit the potential of the village for the advancement and prosperity of the local community. The development of human resources specifically for youth is a serious concern of President Joko Widodo's administration. Through the Minister of Cooperatives and SMEs, it is very encouraging for young people to enter the business world, such as conducting training
around businesses / businesses for young people. In the field of sports, the Minister of Youth and Sports (Menpora) always provides bonus scholarships for athletes who excel especially from the youth. By way of respect and appreciation given to outstanding youths spur other young people to compete to improve achievement. This method should be supported by the Provincial, Regional, Village / Village Governments in order to increase youth resources.

Stipulated clearly in Law Number 40 of 2009 concerning Youth, article 10 reads; the government has the task of carrying out government affairs in the field of youth in the context of sharpening, coordinating and synchronizing government programs. Youth organizations should be a place for young people to gather together in formulating a new breakthrough to improve their quality so that their implementation is felt by the surrounding community. Youth in each region must be the front guard to create peace and harmony. Youth organizations are not necessarily complementary at regional events, or national events. But it must also be able to provide input for development ideas for the realization of regional development and especially in the villages in Kotapinang Sub-district, South Labuhanbatu District. In the sphere of community life, youth is a potential identity in the social fabric as a successor to the ideals of the nation's struggle and a human resource for nation building, because youth as the hope of the nation can be interpreted that those who control youth will control the future. One of the youth steps to bring this nation to a better direction is by the active participation of Indonesian youth in community development efforts. Community development according to the United Nations (UN) is a process through the efforts and initiatives of the people themselves and government activities in order to improve economic, social and cultural conditions.

Based on the definition issued by the UN there are at least two roles of youth in relation to community development efforts. Namely: youth as the initiator of a group of people to jointly work with them to improve conditions within the community itself, youth act as facilitators of the program. a program initiated by the government in terms of community development. By taking initiatives from various realms of life, young people can become an alternative force for civil society in order to respond to a number of social and political distortions in the nation, ranging from the classic problem of corruption to the problem of manipulation. In playing their political roles young people will face a big power, namely: Economic power that utilizes political transitions to facilitate their business access to the policy making process. Economic power can "soften" a number of young people's ideals, even a certainty will fall into political pragmatism, instead of building political ethics and morals, the opposite is true. Global political forces that helped determine the direction of national democracy, the blending of the reformist forces and the status quo became blurred, even the reformist parties were infiltrated by jumping politicians, including young politicians.

The countryside is very strategic to build a country. This is because the village is the spearhead of problem identification; community needs at the grassroots level until the planning and realization of state objectives are at the village level. The problem is that 60 percent of Indonesians live in villages and the facts show that the highest dropout rate is in villages. Likewise, health problems, such as toddlers with poor nutrition and the risk of death in women giving birth, are most numerous in the village. Compounded by the backwardness of the village economy which has triggered an increase in the country's poverty rate (Kompasdotcom, 2012). The village has the right to manage and manage its own household called village autonomy. The right to administer and regulate its own household as a legal community unit is not only related to the interests of state
government, but also related to the interests of the community. With Law Number 6 of
2014 concerning Villages, villagers have gained a stronger legal umbrella to be
protected, empowered to become developed, independent and democratic villages so as to
create prosperity in all villages.

Kotapinang Sub-district is located in South Labuhanbatu district, North Sumatera, Indonesia. Kotapinang Sub-district occupies an area of 482, 40 Km² which consists of 9 villages and 1 village. The Kotapinang Sub-district area in the north is bordered by the people's Kampung District, in the east it is bordered by Torgamba sub-district, in the south with the right and Torgamba Sub-district and in the west it is bordered by Silangkitang Sub-district. Of the 10 villages in the Kotapinang sub-district, the largest area is Sisumut Village with an area of 133.30 Km² and the smallest is Sosopan Village with an area of 30.50 km². Kotapinang Subdistrict population in 2017 was 64,200 people consisting of 31,726 men and 30,674 women. The highest population is in Kotapinang Village, which is 24,141 people, while the smallest is in the Normark Plantation Village, which is 1,198 people.

The majority of people in Kotapinang Sub-district work as farmers, day laborers, and gardeners because this area has agricultural and plantation land. But there are also people working as traders and civil servants. Youth work and move to explore the existing potential. The role of youth in increasing economic growth by optimizing village potential. Villages in the sub-district of South Labuhanbatu district have different potentials. The youth must depart from the village then look for the potential of the village in Kotapinang Subdistrict, South Labuhanbatu district so that its potential can be utilized to improve the welfare of the village community. The purpose of this study was to examine the potential of the village and find out the role of youth in the utilization of village potential in Kotapinang Sub-district, South Labuhanbatu district.

LITERATURE REVIEW

Role

According to etymology the role comes from the word "role" that is "showman". Role (role) is a dynamical aspect of status if a person carries out his rights and obligations according to his position, then he has carried out a role so that between status and role cannot be separated because one depends on the other. According to Poerwadaminta (1985: 725), a role is something that is part of or holds leadership mainly or because of something or an event. According to Azra (1999) youth can be seen from three categories, First, young people who have a vision, namely young people who want to build intellectual traditions and discourse of thought through intellectual learning (Intellectual Enlightenment) and intellectual enrichment and intellectual enrichment (intellectual enrichment) Strategic Approach what is used is through maximizing the potential of individual consciousness and awareness that enables the creation of the scientific community. Youth have the power in terms of pengelemtasian and intellectual put forward in inviting the community. The role of youth is also important for the future of regions that have, for example, experienced conflict. The nature of respect and openness to various ideas and cultures can bridge diverse ethnic, racial, social and political groups. By exploiting this potential, it is hoped that there will be an opportunity to create a more peaceful future for the next generation.

When the condition of the nation such as this, the role of youth as a driving force in the development of the Indonesian nation is expected to form an organization that must be positive which can play a greater role. At the time of the struggle of the Indonesian nation, the youth and student movements often spearheaded the national struggle. Some of the youth and student movements that are recorded in history are Utomo, youth oaths, Indonesian associations, and rengasdengklok events. The problem faced today is that many
young people do negative things. Even though it should be through the younger generation being inspired to overcome various conditions and existing problems, and it is time for youth to position themselves as active young generation to lead the process of changing the nation’s ideals of the youth first. So basically the role of youth today is very alarming as many young people rarely socialize with the surrounding community. But actually the role of youth in society can be enhanced by holding events in the form of social service with fellow youth so that they can be more sociable with the surrounding community. The youth movement as a civil society movement will continue to place youth in the position of the trigger as well as the guardians of change. This spirit should be maintained in every youth movement. Indefendensi as the choice of the spirit of the youth movement and independence as its soul, should not fade in the youth movement.

Youth

The first definition, Youth is an individual who when seen physically is experiencing development and psychologically is experiencing emotional development, so that youth is a human resource for development both now and in the future. As a prospective future generation who will replace the previous generation. Internationally, WHO refers to as "young people" with an age limit of 10-24 years, while those aged 10-19 years are called "adolescencia" or teenagers. The International Youth Year, which was held in 1985, defines residents aged 15-24 as a youth group. The second definition, young people are individuals with dynamic characters, even volatile and optimistic but do not yet have stable emotional control. Youth face a period of social and cultural change. Meanwhile, according to the draft Law No. 40 of 2009 concerning Youth, Youth are those aged between 16 and 30 years. Looking from the age side, youth is a time of development both biologically and psychologically. Therefore youth always have aspirations that are different from the aspirations of society in general.

In a positive meaning, these different aspirations are called reformist spirit. The explanation of youth refers to the age factor so that youth enter an important part in the growth and progress of the Indonesian nation. Growth and development of youth at the age above implies that youth have a big hand and golden periods which if not optimized will be in vain. In Indonesian vocabulary, youth are also known as young people and young people. Often the terminology of youth, youth, or youth has various definitions. The definition of youth above is more about technical definitions based on age categories while other definitions are more flexible. Where youth / young people / young people are those who have a reforming and progressive spirit. Youth has a complete role now and in the future. The participation of youth in various roles increases, improves the economy and also strengthens relations between regions.

Youth is a phase that is in the cycle of human life, where the phase can be towards development or change. Youth contribute thoughts and deeds to the community. The existence of youth among the community is enough to attract attention due to some of the roles of youth in society running effectively. Youth since its rise when the oath of youth has got its own place in government. Government in running the wheels of government can not be in full without the interference of youth. Youth have entered an important part of society and this cannot be separated. (Koentjaraningrat, 1997). Youth are the new generation in a community to make a change for the better. The existence of youth has so far received serious attention from the government. The mandate of the law stipulated to encourage the government to always provide a forum for youth to make a change or youth activity that benefits the community. Changes achieved in the pattern of community development emphasize the youth movement.
Village Potential

Village Potential is the power, strength, ability and ability of a village that has the possibility to be developed in order to improve the welfare of the community. According to R. Bintarto; The village is a geographical embodiment of the local physiographic, social, political, economic and cultural elements in their relationships and mutual influence with other regions. According to Law Number 22 of 1999, the Village is a legal community unit that has the authority to regulate and manage the interests of the local community based on local origins and customs that are recognized in the National government system and are in the Regency area. According to Law Number 22 of 2014; Village is a village and a customary village or referred to by another name; hereinafter referred to as village, is a legal community unit having territorial boundaries that are authorized to regulate and administer governmental affairs, the interests of local communities based on community initiatives of original rights and / or traditional rights that are recognized and respected in the system of government of the Unitary Republic of Indonesia. The village government becomes the center of the village government that has relations with the BPD, elements of civil society and the economic community. The position of the village head is as a personification of the village government. The village government and the village head are part of the state bureaucratic chain that carries out the regulatory and control functions in the region through administrative services, implementation of development projects, community mobilization to support government policies in conducting for its citizens in the village.

Meanwhile, according to Sunartiningsih (2004) village empowerment in the context of village communities is the ability of individuals who are united in the community and building the empowerment of the community concerned. A society where most of its members are physically and mentally healthy, educated and strong, certainly has a high level of empowerment. However, in addition to physical things like that also develops intrinsic values such as family values, mutual cooperation and kebenikaan. This existence then becomes the basic element that enables a society to survive and in a dynamic sense develop themselves to achieve goals. Community empowerment emphasizes more on efforts to improve the dignity and levels of the people who in their present condition are unable to escape the pitfalls of poverty and underdevelopment.

Types of Village Potential

Village potential is all natural resources and human resources that are contained and stored in the village. Where all these resources can be utilized for the survival and development of the village. The village potential itself is divided into 2 namely physical potential and non-physical potential.

1. Physical Potential

Physical potential is the potential associated with natural resources in the village in the form of:

a. Land, is an important factor for the livelihoods of villagers.

b. Water, used to fulfill daily life

c. Humans, in this case interpreted as labor.

d. Weather and climate, have an important role for villagers.

e. Livestock, have a function as a source of animal power.

2. Non-physical potential.

Non-physical potential is all potential related to the village community and its behavior. Other non-physical potentials are village institutions, village apparatuses, customs and culture. A village community that lives for a long time will form its own life order. The way of life will be influenced by the natural conditions of the village area itself. The non-physical village potentials include:
a. The village community who live in unison is a force for the production and development of the village.
b. Village officials or village officials who work optimally become a source of order and the smooth administration of the village.
c. Village social institutions encourage active participation of villagers in village development activities.

The physical and non-physical potential of the village is a supporting factor for the role of the village as a hinterland, which is a region that produces staples for urban communities. Whereas villages are classified into three:

a. The village area has high potential, there are potentially fertile areas, flat topography and is equipped with technical irrigation.
b. Potentially moderate village areas, located in areas with agricultural land to be fertile, uneven topography and partial technical and technical irrigation.
c. Potentially low village area, found in infertile agricultural areas, rough topography (hills) and water sources dependent on rainfall.

In rural development, there are many obstacles, including the most pressing ones, namely:

a. Reducing the gap (inequality) between villages and cities, and between development actors.
b. Changing development patterns and approaches that are centralistic, holistic and participatory.
c. Improving the ability of human resources (HR) community officials to support rural development and growth.

The obstacles in relation to the utilization of natural resource potential are:

a. Transfer of agricultural land exploitation by non-tenants or urban communities (especially in Java).
b. Low land productivity due to limited labor for land management (especially outside Java).
c. The reduced capacity of the carrying capacity of the environment, especially water resources in temperate regions and dry soil.

**Village Typology**

**Village Typology Based on the Kinship Bonding System**

Based on the physical characteristics of the village in the community's life system, kinship ties are formed within the residential areas. There are at least three systems of kinship ties that form the types of villages in Indonesia, namely:

a. Geneological Village Type
   A village that is inhabited by a number of residents where the community is related by blood or is related by blood. Geneologically formed villages can be distinguished into Patrilineal, matrilineal and mixed types.

b. Territorial Village Type
   A village occupied by a number of residents on a voluntary basis. Territorial villages are formed into settlements based on shared interests, thus they live in a village that becomes a legal community where the bonds of the people are based on certain regional ties, places or regions.

c. Mixed Village Type
   A village where residents have ancestral and territorial ties. In this form, the bonds of blood and ties of territory are equally strong.

**Village Typology Based on Expanse of Residence**

Based on the expanse of residence, the village can be classified as follows:

a. Rural Village
   The villages are scattered in various remote areas far from city life. The ideal atmosphere of rural villages in general is more colored with nuances of peace, namely a simple, quiet, quiet life in a friendly natural environment.

b. Mountain Village
   There is a village in the mountains; the centralization is encouraged by the mutual
cooperation of the population. The increase in population divided the mountain village in all directions, without a plan. The centers of population activity shifted following the division of the village.

c. Highland Village
Village in the mountains. Settlements here generally extend along the main road that runs through the village. If the village blooms naturally, agricultural land outside the village along the highway becomes a new settlement. There are times when the expansion into the direction (behind the old settlement). Then a road is circled around the village (ring road) so that new settlements are not isolated.

d. Lowland Village
Villages that are located in the lowlands and livelihoods from lowland villages usually depend on the agricultural sector.

e. Coastal / Coastal Village
The village is located in a sloping coastal area. can grow settlements that search for fisheries, coconut plantations and trade. Expansion of the coastal village by connecting along the coast, until meeting with other coastal villages. Centers of small industrial activity (fisheries, agriculture) are still maintained near their original dwellings.

Village Typology Based on Settlement Patterns
According to Paul Landis (1948) there are basically four types of agricultural villages:

a. Farm Village Type
A village where people live together in a place with rice fields around them. This type of village is often found in Southeast Asia, including Indonesia.

b. Nebulous Farm Village Type
A village where the inhabitants live together in a place, and some others spread outside the settlement with the rice fields.

c. Arranged Isolated Farm Type
A village where people live around the roads that connect with the trade center and the rest is their rice fields.

d. Pure isolated farm type

A village where the inhabitants reside spread out with their respective fields.

Soekandar Wiriaatmadja (1972) divides rural settlement patterns into four patterns, namely:

a. Spread of Settlement Patterns
Farmers' houses are far apart apart from each other. This pattern occurs because there are no major roads, while people have to work on the land continuously. Thus, these people are forced to live in their land.

b. Elongated Settlement Patterns
The form of settlements that snapped along the highway or along the river, while the agricultural land is behind their respective homes.

c. Gathering Settlement Patterns
The form of settlement where people's houses gather in a village, while the agricultural land is outside the village.

d. Circular Settlement Pattern
The form of settlements where the houses of people circle around the edge of the road, while the agricultural land is behind it.

Village Typology Based on Livelihoods
The types of village communities based on basic livelihoods can be classified in agricultural and industrial villages.

a. Agricultural Village
Agricultural villages consist of: 1) agricultural villages in the narrow sense which include: agricultural villages wetlands and drylands. 2) villages in the broadest sense include: community-owned plantation villages, private-owned plantation villages, tambak fishing villages, sea fishing villages, and livestock villages.

b. Industrial Village
Industrial Village is a village that produces agricultural equipment both traditional and modern.

Village Typology Based on Activities
The types of villages based on their activities can be grouped into:

a. Agribusiness Village is a village that has an orientation on the agricultural sector,
especially in the trade sector of agricultural products.
b. Agroindustrial Village is a village oriented in the agricultural sector, especially in the agricultural industry, both in terms of agricultural technology and others.
c. Village Tourism is a village located in a tourism area and the livelihoods and daily lives of the village community are very dependent on businesses that rely on the tourism sector of the village.
d. Non-Agriculture Village is a village in which the village environment no longer carries out agricultural activities, but a business undertaken by the community who lives in the village, which is trying to work outside the agricultural sector. For example by trading.

Village Typology Based on Development
Based on its development, the types of villages in Indonesia are divided into four types, namely:
a. Pre-village (Traditional Village)
This type of village is generally found in the lives of remote indigenous peoples, where the whole life of the community including farming technology, how to maintain health, how to eat and so on is still very dependent on their natural surroundings. This type of village tends to be sporadic and temporary.
b. Swadaya Village (backward village)
A village area where most of the people fulfill their needs by holding their own. The village is generally remote and the community is rarely connected with outsiders, so the progress process is very slow due to lack of interaction with other regions or even none at all.

The characteristics of independent villages:
1) The area is isolated with other regions.
2) The population is sparse.
3) Homogeneous livelihoods that are agrarian.
4) Are closed.
5) Communities hold fast to adat.
6) Technology is still low.
7) Facilities and infrastructure are very lacking.
8) Human relations are very close.
9) Social supervision is carried out by the family

c. Swakarya Village (village is developing)
The situation is more advanced than in a self-supporting village, where the community has been able to sell excess production to other regions in addition to meeting their own needs.
The characteristics of the swakarya village:
1) The influence from outside so that it causes changes in mindset.
2) Society has begun to be separated from adat.
3) Productivity starts to increase.
4) Infrastructure facilities began to increase.
5) There are influences from outside which cause changes in the way of thinking.
d. Swasembada Village (developed village)
Villages that are able to develop all their potentials optimally. This is marked by the ability of the community to interact with outside communities, exchange goods with other regions (trade functions) and the ability to influence each other with residents in other regions. the community can absorb new technology to utilize its resources so that the development process runs well.
The characteristics of a self-sufficient village are as follows:
1) Human relations are rational.
2) Homogeneous livelihoods.
3) Technology and higher education.
4) High productivity.
5) Regardless of custom.
6) Complete and modern facilities and infrastructure.

Regional development based on rural development (rural based development) includes many aspects and challenges, including:
a. The potential of natural resources (SDA) in general can be said is relatively sufficient, while the ability of human resources (HR) is still relatively weak.
b. Basic infrastructure needed to increase agricultural production (e.g., availability of water resources, irrigation networks, village roads, etc.) still needs improvement.

c. The economic and social institutions that have been formed in many rural areas have not yet functioned optimally.

d. Some other weaknesses and limitations such as access to marketing of rural products are still very weak and limited.

e. Farmers’ access to credit facilities (capital resources) for the development of rural economic enterprises is still limited and others.

Community needs for the proposed rural development program are very broad, while the available rural development funds are still limited. The desire of the community is very much, but not always a necessity. Needs are program proposals that are prepared using measurable criteria, so that priorities can be determined. Based on the limited funds available and the proposed programs that have been prepared based on priority scale, development programs can be chosen that are truly high priorities and needed by the local community, then followed by the second, third and so on priorities. Nationally, the number of villages is 65,000. Each has its own characteristics. The very wide variety, it is very difficult to formulate a specific policy of rural development policy. So to solve these difficulties is deemed necessary to compile "village typology". With the typology of the village will get a simpler picture but can illustrate the profile of villages that have similar characteristics, thereby facilitating the analysis, and compilation of the development policy strategy.

MATERIALS & METHODS

The method used in this research is descriptive method with a qualitative approach. This research was conducted on village youth in Kotapinang sub-district, South Labuhanbatu District. The villages in the Kotapinang Subdistrict consist of; Sisumut Village, Simatahari Village, Mampang Village, Sei Rumbia Plantation Village, Nagodang Plantation Village, Normark Plantation Village, Hadundung Village, Sosopan Village, Pasir Tuntung Village. Data Sources The data sources in this study consisted of primary data sources and secondary data sources. In this study, researchers used key informants, key informants and additional informants, namely as follows:

1. Key Informant, Village Head, Village Youth Figure Head of Village in Kotapinang sub-district, South Labuhanbatu District.
2. Main Informants, namely:
   a. Youth who are members of the village youth group in Kotapinang sub-district, South Labuhanbatu district.
   b. Village community in Kotapinang sub-district
3. Additional Informants, namely:
   a. Village Government in Kotapinang sub-district, South Labuhanbatu district.
   b. South Labuhanbatu District Government.
   c. Head of South Labuhanbatu district Community Empowerment Service.

Statistical Analysis

Qualitative data analysis according to (Seiddel, 1998), the travel process as follows:

1. Make notes that produce field notes, with it coded so that the source of the data can still be traced.
2. Collecting, sorting, classifying, synthesizing, making summaries, and making indexes.
3. Thinking, by making the data categories meaningful, looking for and determining patterns and relationships, and making general findings.

Furthermore, according to Mcdury (Collaborative Group Analysis Of Data, 1999) the stages of qualitative data analysis are as follows.

a. Read / study data, mark key words and ideas in the data.
b. Studying the key words, trying to find themes derived from the data.
c. Write down the 'model' found.
d. The coding has been done.
Qualitative research there are three approaches to data analysis mode. Namely hermeneutics, semiotics, narratives, and metaphors.

1. Hermeneutic

Hermeneutics are the cornerstone of philosophy and are also the mode of data analysis. The intention of the split is that the type of hermeneutics is used as a philosophical basis, namely at the time of human understanding of interpretativism. Whereas when it is said that the mode of analysis is related to understanding textual data. Hermeneutic mainly deals with the interpretation of a text analogy. The idea of a hermeneutic circle is a dialectic between the comprehension of the text as a whole and the interpretation of its parts, whose description is expected to carry meaning with guidance by the expected explanation.

2. Semiotics

Semiotics can be needed both as a philosophical and as an analytical mode. Semiotics mainly deals with the meaning of signs and symbols in language. Important ideas are that words or signs can be assigned with the meaning that appears in the text. The forms of semiotic include:

- a. Content Analysis
  Content analysis is a research technique used for valid and replicable references of data in the context. Researchers look for shapes and structures and patterns that are meaningful in the text and make conclusions on the basis of the order that is found.

- b. Discussion Analysis
  In the analysis of speech, meaning is assumed that meaning is sharpened in the context of exchange. The researcher himself is immersed in the situation to reveal the background of its application.

- c. Discourse Analysis
  Built from content analysis and conversation analysis. But the focus is on "language games". Language play is an interaction of well-defined units consisting of verbal sequences of motion that turn into phrases, namely the use of metaphors and allegories that play an important role.

3. Narration and Metaphors

Narration is defined as fairy tales, stories, impressions of facts, which are told in the first person. There are various ways of narration, there are oral narrations to historical narratives. Metaphor is the application of a name or description of a phrase or term in an object or act that is not actually applied.

The Role of Youth in Utilizing Village Potential in Kotapinang Sub-district, South Labuhanbatu District.

The Role of Youth in Sisumut Village

According to Suseno (1987: 19) the word moral is always on the merits of humans as humans. The active role as a moral force is realized by developing aspects of ethics and morality in acting. Village youth live in differences. The solidarity of the youth of Sisumut Village is quite good. Counseling is indeed their habit. Keeping together with other hamlets is as good as possible. In utilizing the village's potential, the role of youth in North Sumatra seems so real.

Youth life in Sisumut Village puts forward the value of kinship. Youth in Sisumut Village gather in several youth organizations namely, the Indonesian Mosque Youth Youth Coordination Agency (BKPRMI), Youth Organization and Anti-Narcotics Movement (GAN). BKPRMI is a combination of all Mosque Youth in Sisumut Village. The Role of Youth in Sisumut Village As a moral force utilizing the potential of the village are:

a. Sisumut Village Youth have a wise attitude in dealing with differences in facing problems. When there are problems among village youth, youth meet with community leaders to resolve the case.

b. Sisumut Village Youth respect each other's youth. When a youth group in a hamlet in Sisumut Village holds a recitation, religious events such as Maulid or Isra walmi'raj. So the young man invited to attend the event is a reflection of mutual respect and a commendable attitude. Silaturrahmi established among village youth in Sisumut is strong enough so that togetherness exists.

The Role of Sisumut Village Youth as Social Control in Utilizing Village Potential in Kotapinang Sub-district, South Labuhanbatu District
